Tool for calculating the fabric amount

Now available as an app

Available for Android in the Google Play Store,
for iOS in the App Store, and in the Windows Phone Store!

Our Newave calculator is now also available as an app. You can use it to calculate the amount of the needed fabric and gliders.

For fabrics without a pattern repeat please use the first input mask.
The regular markings on the tape can be used in this case.

Calculating tool for fabrics **without** pattern repeat

Please enter the following:

- 1) Desired fullness
- 2) Desired curtain width
- 3) Distance between the gliders
- 4) Allowance for the seam
on the left and right side

Results: possible curtain widths, amount of gliders, depth of the pleats, needed fabric amount. For fabrics with a certain pattern repeat, please use the second input mask. We recommend to use a pattern repeat between 24 cm and 46 cm or a perfect fall of the pleats.

Calculating tool for fabrics **with** pattern repeat.

Please enter the following:

- 1) Pattern repeat
- 2) Desired curtain width
- 3) Distance between gliders
- 4) Allowance for the seam
on the left and right side

Results: curtain width, fabric width, amount of gliders, fullness, needed fabric amount.

Go on to **www.gerster.com** to use our fabric amount calculator in 7 languages!

NEUWAVE

If you combine a Newwave tape intended for the 6 cm distance with an 8 cm rotating glider cord and use the markings for 200%, the fullness ratio amounts **to approx. 150%**.

Newwave - curtain tapes

intended for 6 cm distance

6113

14170 black

14140

14195 black

marking for 200%

This is due to the wider spacing of the hooks on the 8cm glider cord, resulting in less fabric gathering compared to the 6 cm glider cord.

STOPPER

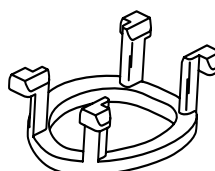

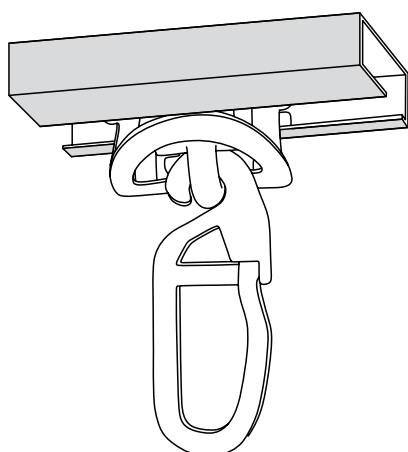

For Newave curtain tapes, there is a special stopper designed to keep the curtain in the desired position, preventing it from sliding back on its own – something that can often happen with lightweight fabrics or uneven curtain tracks. **This stopper can be used not only with Newave tapes but also with many other types of curtain tapes.**

Important: The stopper is compatible with all standard hooks, such as art. 1700, as long as the hooks fit through the hole in the stopper. It offers a simple yet effective solution for keeping curtains reliably in place.

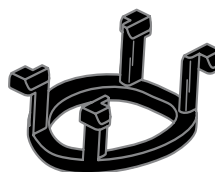

With the stopper, the curtains always hang exactly as intended.

Example:

Curtain hook 1700 with stopper 14143

Stopper white
Art. 14143

Stopper black
Art. 14168

DUOWAVE

If you hang a Duowave tape on an 8 cm glider cord and do not sew the pleats at the markings, the fullness ratio amounts **to approx. 160%**.

HARMONICA

If you gather a harmonica tape and attach curtain hooks to the markings on both right and left sides of each pleat, the fullness amounts **to 120%**.

If you gather a harmonica tape and attach a curtain hook that holds both right and left markings of each pleat together, the fullness amounts **to 200%**.
